

WOULD YOU LIKE TO IMPROVE THE QUALITY OF YOUR GAZETTEER DATA?

Candidate Processing Is Key

Emergency services need accurate data, fast. The right data stored within your gazetteer can save you seconds when time is of the essence. How does Candidate Processing help you **maintain reliable data**?

What is Candidate Processing?

When you find an invalid address, that information needs to be fed back to your local council. This is when you create a 'candidate' i.e. the information about the invalid address is sent to the Hub. The Hub then sends the candidate to your local council so that it can investigate and then either accept or reject the candidate. The local council then feeds the information back to the Hub and you are informed of whether you need to perform a Change Only Update. If the local council rejects the candidate, you may want to store that information for your own records as a Local Only Record.

What does your gazetteer software need to do?

Your gazetteer software will need to **process candidates efficiently**. If you work in partnership with your local authority, the Candidate Processing will allow you to have clean data at your finger tips.

How will GGP NGz help?

The **GGP NGz gazetteer** simplifies the process through some key features:

- Easy to use interface with the application guiding the user through the process of creating candidates
- Automated import of Change Only Updates (COUs)
- Automated submission of candidates to the Hub
- Updates by email with the log files from the COU process
- Ability to maintain Local Only Records
- Maintains cross references from other systems so systems remain integrated

Candidate Processing Deadline

You may be aware that there is a deadline for having Candidate Processing in place for local authorities. Are you ready to assist your local council in the quest for better data quality?

Why Choose GGP NGz Gazetteer?

- There are low set up, implementation and training costs
- GGP NGz works well in a master/slave environment, avoiding the need to remove existing modules dependent on other systems
- GGP NGz works with SQL Server and Oracle
- Reporting and utility tools such as validation, health checks and data exchange are included as standard
- A range of batch editing tools allows users to increase work efficiency by doing more in less time
- The whole system is open, making back office integration easier and faster
- GGP Systems has over 20 years of experience and expertise in providing gazetteer and GIS solutions for the public sector. Technical support, training and consultancy are all under one roof, from one supplier.
