GGP NGz

Land and Property Gazetteer Management Solution

GGP NGz is the ultimate system for managing your corporate property and street database. Part of a spatially enabled National Land and Property Gazetteer solution (NLPG), GGP NGz provides easy access to the central dataset from an array of systems including Geographical Information Systems (GIS), Customer Relationship Management Systems (CRM), web-based applications, and other corporate and departmental back office applications.

This BS7666 data is suitable for Local Authorities, Police, Fire Service, National Parks, Health Authorities and private institutions. It contains the most up to date and complete dataset for addressing in the UK. Organisations can be either viewers or maintainers of the data. GGP's NGz is an excellent tool for storing and maintaining property and street data - data that is fundamental to service delivery in all sectors and an essential ingredient to e-Government and t-Government strategies.

The BS7666 address data enables huge cost savings against maintaining multiple and potentially out of date datasets, more informed decision making, faster response times to the customer and the ability to integrate all your back office applications to one core up-to-date dataset.

Holding the most complete up-to-date information is vital to improving public services.

GGP NGz is the ultimate system for managing your corporate property database, combining flexibility with ease of use to help you manage your systems and applications.

The key benefits of our solution are:

- BS7666 - DTF 7.3 compliance throughout
- Full National Street Gazetteer (NSG) and Associated Street Data (ASD) compliance
- Property, Street and ASD editing integrated into the same core dataset
- Import DTF 6.3, DTF 7.3, NSG, ASD
- Export DTF 6.3, DTF 7.3, CSV, XML, NSG, ASD and Postal Address formats
- Automated export to the NLPG hub and back office applications
- Multi user access enabling your cleansing to be completed much faster
- Full secure systems with controlled access to the software and the level of functionality
- Full open access to the database and a choice of SQL Server, Oracle or Access
- Full Local Land and Property Gazetteer (LLPG), Cross Reference, NSG and ASD maintenance included
- Full set of property, street and cross reference reports included as standard
- Interoperable with any GIS software including GGP, ESRI (Shape), MapInfo (Tab) and Oracle Spatial Locator WKB
- Range of integration tools to integrate all your back office applications with the core up-to-date Street and Property database
- Full accountability with audit and tracking facilities
- Low cost of ownership resulting in a good return on your investment
- Comprehensive address matching facilities
- Users can hot desk or work from home due to central administration
- Excellent support and after sales service
