eGGP Intranet

BROWSER-BASED INTERNAL GEOGRAPHIC INFORMATION SYSTEM

Extending the reach of your GIS functionality throughout the organisation, simply and effectively

eGGP Intranet

BROWSER-BASED INTERNAL GEOGRAPHIC INFORMATION SYSTEM

Certain key services within the organisation require the full access and functionality of GIS. However there are many other important services such as call centres, help desks and fault reporting that can be dramatically improved through access to map based information.

eGGP Intranet allows you to extend the functionality of your GIS throughout the organisation via a browser on an Intranet. The simple interface is designed to make the product easy to use for non-technical users so staff can immediately experience the benefits of the system. eGGP Intranet is easy to deploy throughout the organisation, across multiple sites or off-site, whilst maintaining the security of the system and restricting user access as desired.

eGGP Intranet integrates easily with third-party systems and provides low-cost access to GIS information. Being a server-based product that works with commonly used browsers, deployment is very simple with minimal configuration and maintenance.

eGGP Intranet features user-controlled elements to the interface, which also has a customisable user interface. Additional bespoke functionality can easily be added with the API, using either your own developers or specialist GGP personnel. eGGP Intranet also provides you with the ability to embed map images into third party applications.

Where eGGP Intranet can be used

- Local Authorities – Call Centres, Help Desks, Fault Reporting
- Police Authorities – Crime Statistics, Crime Reporting
- Fire Services – Water Resources, Hydrant Locations

The benefits of choosing eGGP Intranet

Easy to set-up

- A ready-to-go GIS solution offering instant benefits to internal users
- Maps and geographic information made available instantly
- No new tools to learn because all administration is through GGP GIS
- Uses same data as corporate GIS

Easy to use

- Makes essential information easily accessible across the organisation
- Simple interface for non-technical staff
- Extends the benefits of GIS throughout the organisation, multi-site and off-site

Easily customised

- Can be tailored to specific user needs, IT or licensing set up
- Customisable and easily tailored to your specific branding requirements
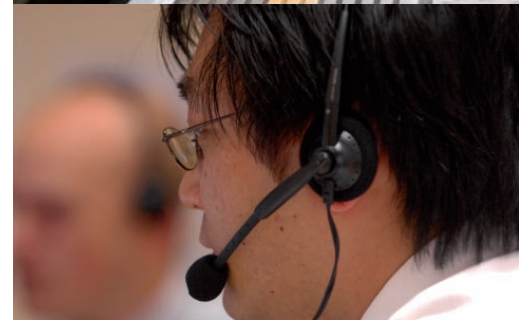

Return on investment

- A quick and easy return on original GIS investment
- Improves public service delivery whilst reducing administrative overheads
- Reduces paperwork and time-consuming administration queries

Highly secure

- Information can be set up with different access levels so only users with the required access can view certain information
- Extendable for third party information which can be combined with results from a query

Quality support

- Dedicated account manager for after sales support
- Highly experienced support and after sales service from GGP, the specialist GIS supplier to the public sector
- Proven track record customising solutions for the public sector

> The simple interface is designed to make the product easy to use for non-technical users so staff can immediately experience the benefits of the system.

eGGP Intranet features:

- User friendly
  - Map controls allow users to pan/move the map as well as familiar GIS navigation capabilities (zooming, panning, querying, etc).
  - TrackPoint™ allows the user to flag different points of interest
  - Allows the user to email a map in a common image format as an attachment or link to the map
- Search
  - Can search on GIS layers such as OS Address Point and Address Point 2
  - Supports third party gazetteer (LLPG) searching
  - Can perform "Find my nearest…?" spatial searches
- Linking
  - Can embed into your intranet for live map information
  - Can retrieve information from different sources and pool them into one combined result
  - Query tool allows direct access and use of information from other sources
- Extensibility
  - Core product provided with an API to develop and power your own applications
  - Can predefine bookmarks helping users find areas of interest
- Data Collection and Analysis
  - Allows users to feedback points on a map and add information to it
  - Reports and filters can be made in GGP GIS to the captured data
  - Can feed co-ordinates in third party systems

For those requiring a full technical specification, a separate product datasheet is also available.

The GGP product portfolio is built around the core GIS and NLPG systems, with many supporting add-ons and services offering a complete solution.

GGP GIS
Geographic Information System

GGP NGz
Land & Property Gazetteer Management Solution

eGGP Internet / Intranet
Web / Browser-based Geographic Information Systems

GGP eGaz
Browser-based Community Portal

GGP Interfaces
Various tools for customising
